

US CENSUS – 2000

Population Subjects (Summarized to Block Group Level) – Summary File 3

Complete list of data tables from the Census–SF3

U.S. Census Bureau

This is the complete list of data tables from the Census–SF3 Data of Census 2000. Summary File 3 (SF3) provides data on population and housing to the Census Block Group level, which is approximately equivalent to a cluster of street blocks. However, also included here are tables identified as PCT and HCT tables, which provide data only to the Census Tract level, which is an aggregate of Block Groups. Census Tract is the most commonly used census geography.

US Census Bureau defines the Census Tract as follows: "A small, relatively permanent statistical subdivision of a county delineated by a local committee of census data users for the purpose of presenting data. Census tract boundaries normally follow visible features, but may follow governmental unit boundaries and other non-visible features in some instances; they always nest within counties. Designed to be relatively homogeneous units with respect to population characteristics, economic status, and living conditions at the time of establishment, census tracts average about 4,000 inhabitants". And the definition of the Block Group (BG) is as follows:

A subdivision of a census tract (or, prior to 2000, a block numbering area), a block group is the smallest geographic unit for which the Census Bureau tabulates sample data. A block group consists of all the blocks within a census tract with the same beginning number.

More recent data released by the US Census are American Community Survey, which is not as exhaustive or methodologically same as the previous Decennial Census.
